2019:

Economic View and Key Industry Outlook

Economic Outlook

TRIS Rating revises its estimate of 2018 Thailand GDP growth rate to 4%, and projects the economy to grow at a slower pace 3.9% in 2019

- The revised estimate of 2018 GDP growth rate is based on weaker-than-expected key economic indicators in Q4/2018.
- 2019F GDP growth is projected to be 3.9%, driven by a weak trend in private consumption which is projected to drop to a 4.0% growth rate in 2019 from 4.7% in 2018

Key Economic Drivers in 2019

TRIS Rating forecasts a 6.6% growth in public investment and a 4.5% growth in private investment, recovered from 4.6% and 3.6%, respectively, in 2018.

Our view is supported by:

- On-going investments in large public infrastructure projects approved in 2018
- Investments and expansion in Eastern Economic Corridor (EEC)

Investment in infrastructure projects

| Line | Destination | Distance (km.) | Progress |

Key Economic Constraints in 2019

- A slower growth in private consumption as a consequence of:
 - High household debts leaves no room for debt fueled consumption
 - Persistently low commodities prices have constrained household purchasing power in the farming sector

TRIS Rating forecasts a 4% growth in private consumption, a drop from 4.7% in 2018

We expect policy rate to increase no more than 25bp in 2019

 A modest rate hike is expected to have minimal impact on corporates' funding costs

The 2019 GDP growth could fall below 3.9% in 2019, taking into consideration the following downside risks:

- Growth in export of goods and services could fall below our base-case projection 4% growth driven by a potential global economic slowdown aggravated by trade tensions and baht appreciation
- Private investment could grow less than our base-case projection of 4.5%, depending on the post-election sentiment

| Issuer | Rating/Outlook |
|-----------|-------------------------|

| TCAP | A+/Stable |
| TBANK | AA-/Stable |
| TISCO | A-/Stable |
| TISCOB | A/Stable |
| KK | A-/Positive |
| LHFG | BBB+/Positive |
| LHBANK | A-/Positive |
| Mega-ICBC | AAA/Stable |
| RHBTH | AA/Stable T1+/Stable |
| GSB | AAA/Stable |

Our Observations

- Retail lending led overall credit growth in 2018
- Banks are shifting focus to higher-yielding assets to make up for losses in fee revenues
- Asset quality: Signs of deterioration in the auto sector emerge; housing remains weak
 - NPL management remains a challenge as NPL relapses remain high
 - Funding cost to rise only gradually given excess liquidity
 - Smaller banks are securing fixed funding to lock in rates

- Capital is strong for all banks; capital quality is average to high
- Macro-prudential measures likely to have short-term impact on credit growth

Banking Industry Outlook

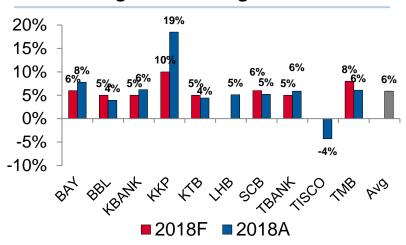

- Industry outlook: Stable
- Expect mid-single digit credit growth
- Asset quality passed its worst. Some weakness in retail sector but manageable
- Capital still solid and continue to strengthen further
- Funding/liquidity still ample; rate hikes by commercial banks so far have been random

2018 Loan Growth

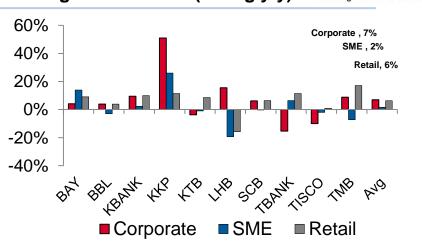

2018 loan growth vs. target

Source: Company data

Loan growth in 2018 (% chg y-y)

Source: Company data. Note: Excluding KKP, corporate +2%, SME -1%, retail +6%

2018:

- Average loan growth: 6%
- 4 of 10 banks achieved loan growth target
- Retail was the growth driver, mainly auto and housing

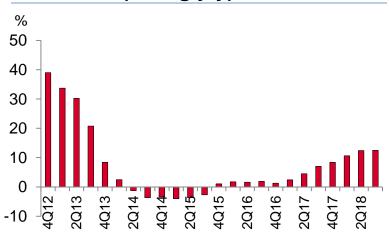

2019F:

- TRIS expects average loan growth for rated commercial banks at 7%
- Retail is likely to still lead growth, but focus shifting to unsecured lending while auto and housing likely slowing down

Retail Loan Growth

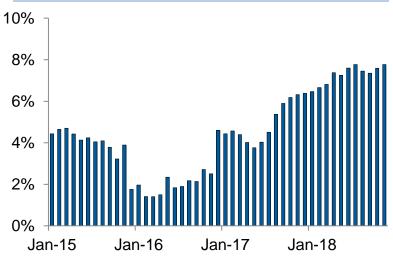

Auto loan (% chg y-y)

Asset Quality

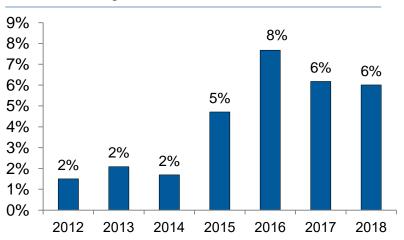

Auto HP NPL

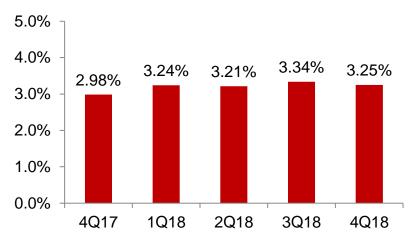

Source: TRIS Rating, Company data (average of available data from rated banks)

NPL relapse rate

Source: Company data (average of available data from rated banks); TDR: Trouble debt restructuring

Housing Ioan NPL

Source: TRIS Rating, Company data (average of available data from 3 commercial banks)

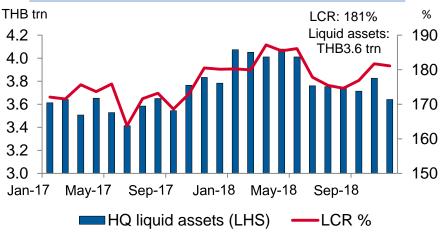

- Auto loans show signs of deterioration after stabilization
- Used car segment appears to be a potential weak spot
- Housing Ioan NPL remains vulnerable. Ratio may rise once Ioan growth slows in 2019
- NPL relapses remain a challenge

Funding and Liquidity

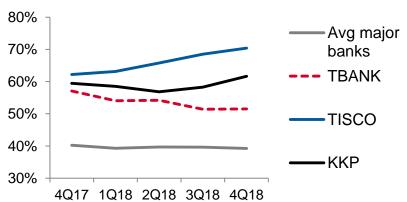

- Banks are likely to raise interest rates only gradually due to ample liquidity and moderate loan growth
- Smaller banks:
 Distinctive funding profile means greater need to secure fixed funding in advance

High-quality liquid assets vs. LCR

Source: TRIS, Company data (10 listed companies)

Credit cost

Source: TRIS, Company data (10 listed companies)

- 2018 financial performance remained relatively healthy despite pressure on fee revenue due to lower credit cost
- Potential rise in asset yield as interest rate cycle picks up
- Risk of rising funding costs for smaller banks

Rating Factors

Positive

- Capital remains strong and likely to strengthen further
- Limited funding risk due to strong system liquidity and moderate credit demand
- Healthy profitability, despite revenue pressure and, supported by lower credit cost

Negative

- Risk of rising funding cost for smaller banks
- Revenue pressure continues from fee-waiving strategy and regulatory requirement on market conduct
- Intense competition and high operating expenses could limit margin improvement

Key Credit Concerns

Weaker economy

Slower loan growth

Rising interest rates

Higher funding cost

Intense competition

Pressure on yield

Declining asset quality

Rising credit cost

New accounting standard

Credit cost / Capital

Stricter supervision

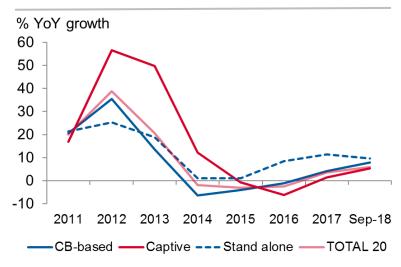

Higher OPEX

Capital, Leverage & Earnings

Receivable Growth

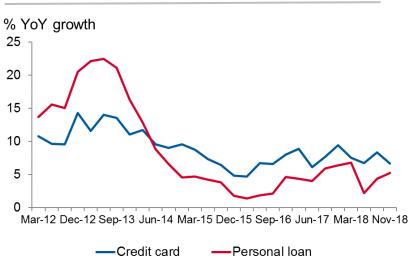

Auto HP loans

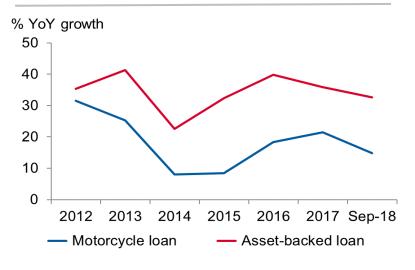

Source: Company data, TRIS Rating

Consumer finance

Motorcycle and asset-backed loans

Source: Company data, TRIS Rating

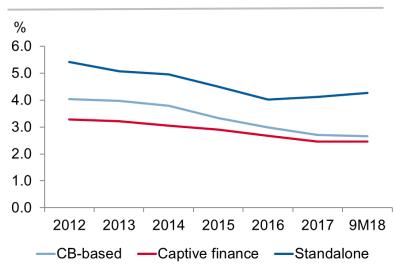

- Slower economic growth still supports credit expansion in all segments
- Auto industry recovery supports loan growth
- Regulation of consumer finance has minimal impact on receivable growth
- Expect loan growth in 2019F for auto HP and motorcycle to remain flat at 10%, consumer finance to remain stable at 8% and assetbacked loans to decline to 20%

Source: Bank of Thailand

Funding Cost

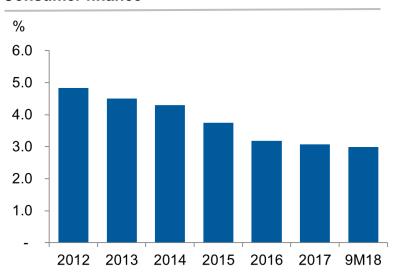

Auto HP loans

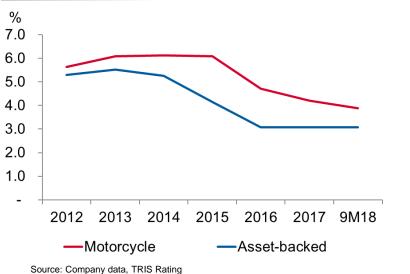

Source: Company data, TRIS Rating

Consumer finance

Motorcycle and asset-backed loans

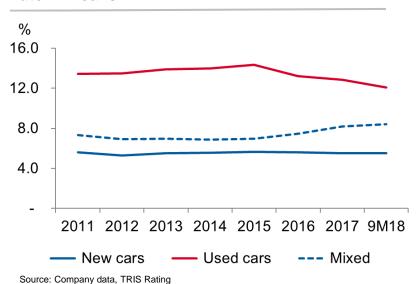

- **Operators have shifted funding structure** from short-term to longer-term in 2018
- Rising interest rate might result in narrower spread
- Rising funding cost can be a risk for standalone auto loan lenders
- Funding cost is not a major concern for motorcycle lenders due to low leverage

Source: Company data, TRIS Rating

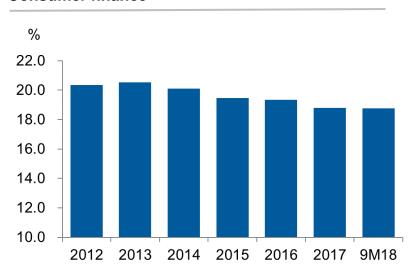

Loan Yield

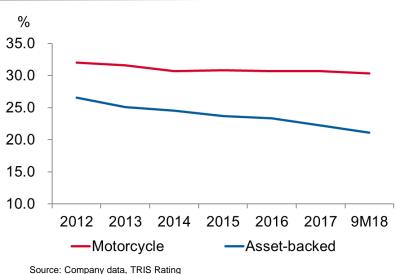

Auto HP loans

Consumer finance

Motorcycle and asset-backed loans

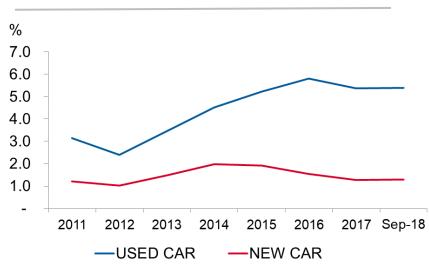

- Yield on used cars is attractive but loan quality control is a challenge
- Regulatory risks
 - Yield enhancement is limited, leading to more focus on merchant fees
 - Guidelines on asset-backed loans to have minimal impact on yield
 - Pending guideline on hire purchase and leasing businesses remains a risk

Impacts on Rated Entities

Credit expansion continues

- Economic growth may decline but remains relatively healthy
- Household debt has been increasing at a declining rate
- Tighter regulations and market conduct should help to eliminate unqualified operators

... but profitability could weaken

- Rising funding costs for small operators
- Competition pressures loan yield
- Declining loan quality and IFRS9 implementation may push credit cost higher
- Market conduct and regulatory requirements increase operating expenses

Agri-Food Companies Rated by TRIS

| Subsector | Company Symbol | Rating | Outlook | |

Sugar: Oversupply continues

 World sugar surpluses are keeping prices low

Consumers have lower demand for sugar

 Thai white sugar producers to face competition from Indian low quality white sugar exporters

World Sugar Prices

Source: USDA:

- 1) Refined Sugar: London International Financial Futures and Options Exchange
- 2) Raw Sugar Prices: Contract 11, New York Board of Trade

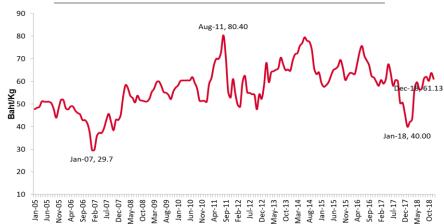

Livestock/Aquaculture: Price Trends

Broiler: Struggling with oversupply

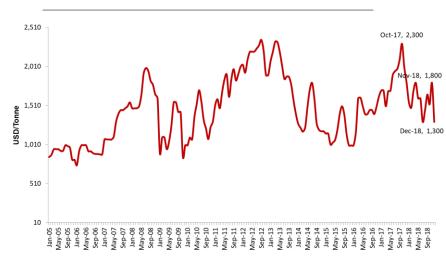

Swine: Moderate rebound

Shrimp: Declining trend

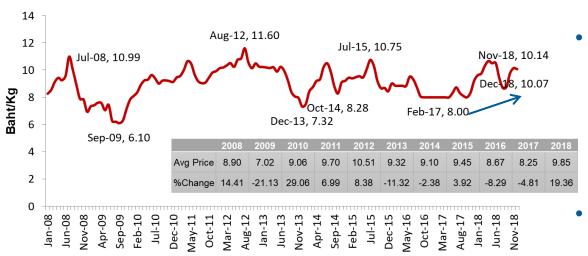

Tuna: More stabilized cost

Livestock feed prices to rise

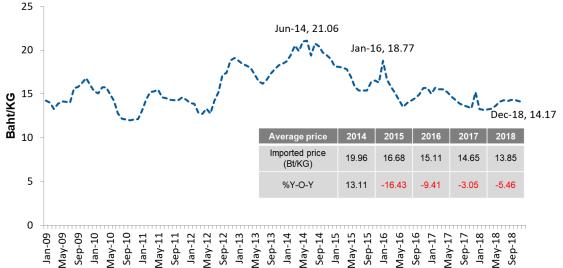

Corn

2019F: Expect supply shortage of corn (5 MMT production vs. 8 MMT demand)

* Possibility of corn subsidies may push cost higher for livestock producers (corn accounts for 5%-15% of total of the state of the sta

Soybean may trend downward but has no material impact on CGS

Our Observations

Sugar:

Diversifying into power and fuel (ethanol) to stabilize commodity price risk

Two sugar companies rated by TRIS have 20% market share in biomass power plants and 36% share in ethanol production in Thailand

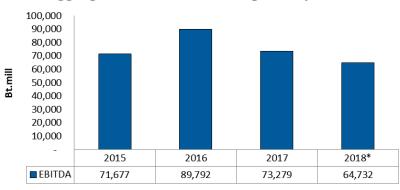

Livestock/Aqua:

- "Farm-to-Table" theme results in shifts to high-margin segments
 Farm to table: Livestock to meat → Bulk meat to retail → Retail pack to food service/ Ready-to-eat markets → Brand ownership
- Develop own distribution channels
- Cut costs and invest in automation to enhance business efficiency
- Balance sheet deteriorates from debt-funded M&A activities

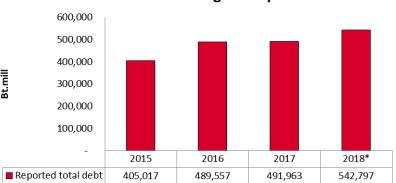

2018: A tough year – Weaker performance and higher leverage

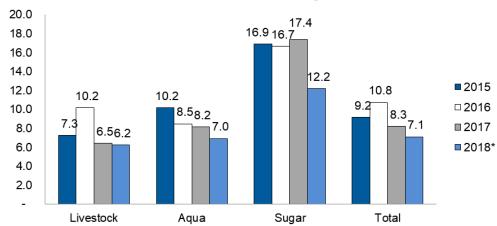

Aggregated EBITDA: Rated-agri companies

Total Debt: Rated-agri companies

% EBITDA Margin

Rating Factors

- (+) Recovery in swine and tuna prices
- (+) Thailand lifted from Yellow cards status by the EU
- (-) Continued imbalance between supply & demand
- (-) Cost pressures are rising
- (-) Increased trade protectionism
- (-) Strengthening Thai Baht

Impact on Rated Entities

- Overall sales growth continues but at a slower pace
- Weaker profitability and cash flow generation
- NOT foreseeing drastic changes in ratings on the large, welldiversified/capitalized companies
- Weaker credit profile of smaller companies (limited product portfolios and higher debt levels)

TRIS Rating's focus:

| Competitive position | Profitability |
|-----------------------------|----------------------|
| Cash flow/leverage analysis | Financial discipline |

Power Companies Rated by TRIS

^{*} Sample of rated power-generating entities

- Total Number of Rated Power Entities: 30
- Representing around 70% of total power generation capacity connected to EGAT grid
- Ranging from large and long-established operators to small-sized new comers

Power Industry Outlook

Outlook: Stable

- The power sector in Thailand will continue to grow, albeit at a low rate.
- Offshore expansion seems inevitable to achieve growth target, leading to potentially higher execution risks.
- Challenges in securing expansion opportunities with acceptable investment risk and return
- Investment opportunities for SPP, IPP, and renewable power producers under new PDP2018.

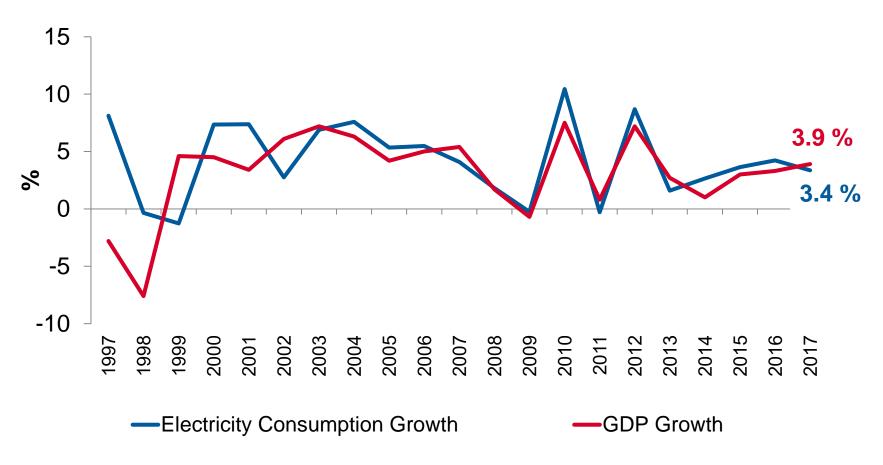

Our Observations

- Limited domestic opportunities for large-scale power producers (IPP), leading to declining growth of assets.
- We see growth of IPS (Isolated Power Supply) and renewable power. Many new comers penetrated into VSPP renewables.
- Delay of PDP revision caused uncertainties.
- Power producers move towards overseas investments, especially CLMV, causing exposure to higher risks (e.g. country, off-takers)

Modest Growth in Power Demand

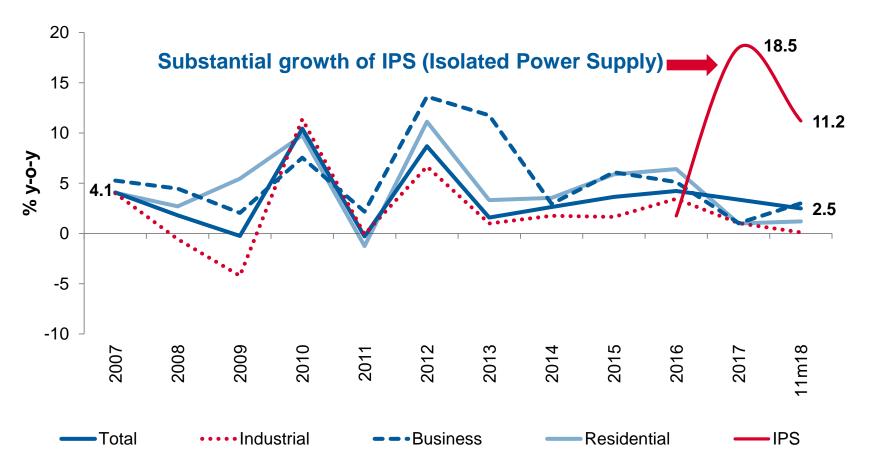

- Power consumption moved in tandem with GDP over past years.
- Growth rate ranged 2%-4% since 2013 (after Global Crisis in 2008 and Great Flood in 2011)

Electricity Consumption Growth

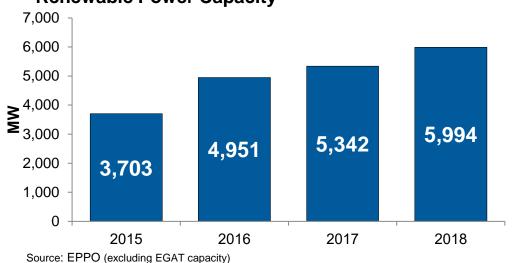

Sources: EPPO, NESDB

IPS has been included in growth calculation since 2016.

Growth in Renewable Power

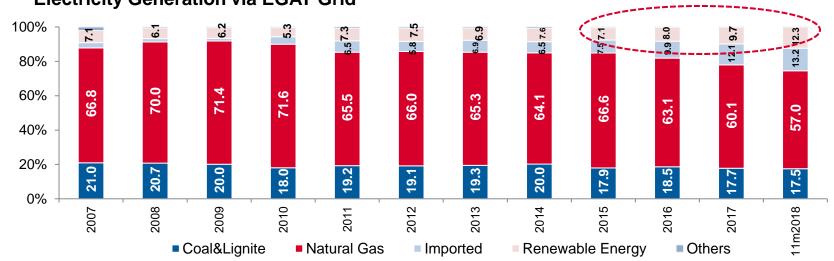

Growing capacity of renewable power, with solar making up nearly half of current capacity

Electricity Generation via EGAT Grid

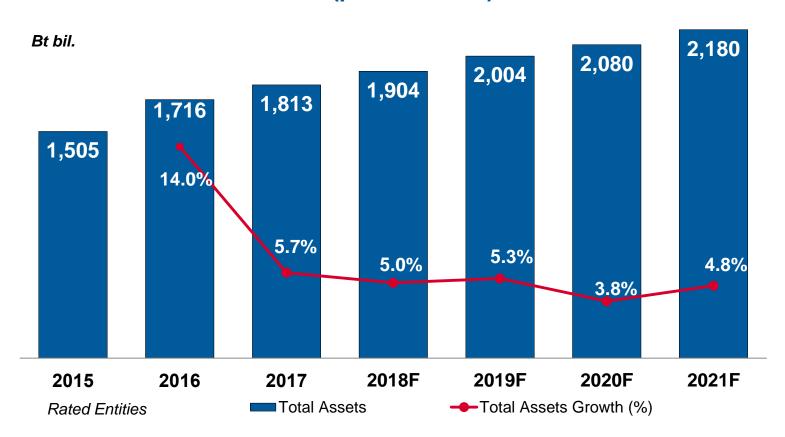

Source: FPPO

Growth of Assets

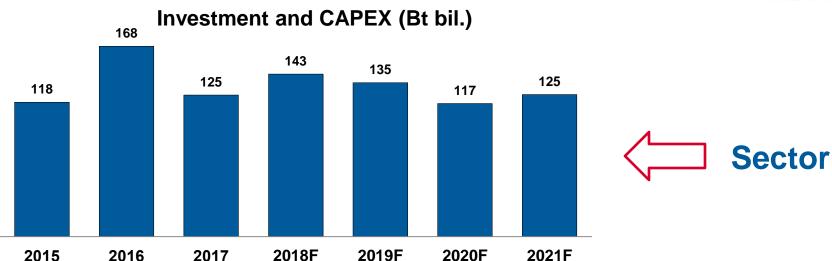

Estimated average asset growth of less than 5% p.a. on average in 2019-2021F (pre-PDP2018)

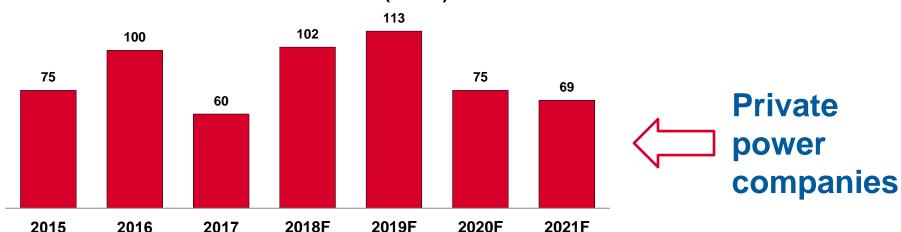

Source: TRIS Rating

Investments by Rated Power Entities

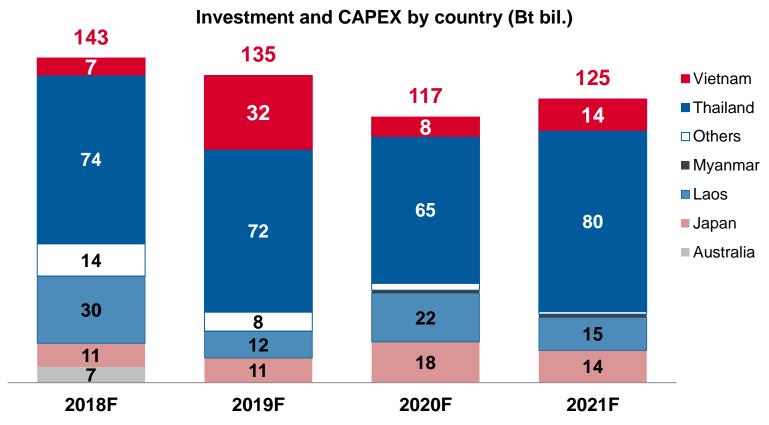

Rated Entities, excluding EGAT, EDLGEN

Rated Entities

Move Towards Offshore Investments

Rated Entities

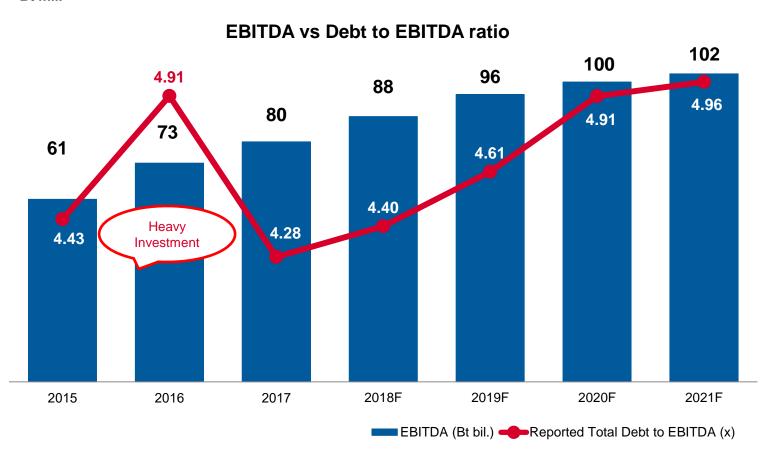

- Domestic power investments account for about 50%-60% for 2018-2021
- Power companies are increasingly looking for opportunities outside of Thailand for business expansion

Source: TRIS Rating

Leverage and Cashflow Protection

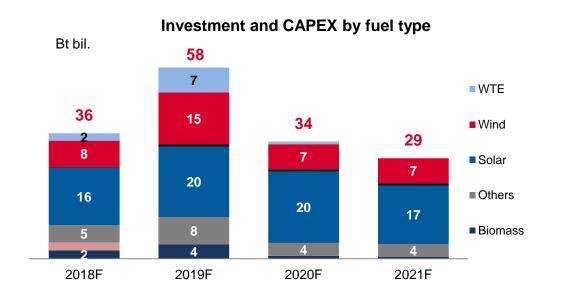

Bt mil.

Investments by Rated Renewable Power Companies

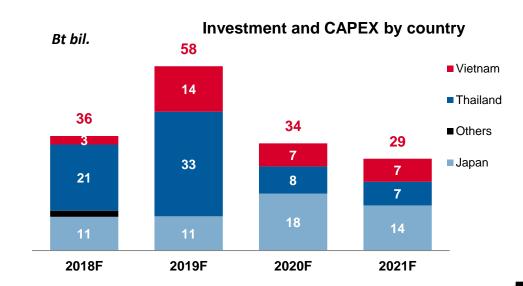

12

- Renewable power companies expand from simple solar power towards more challenging and complex projects such as WTE, biomass
- Solar power still maintains the largest portion

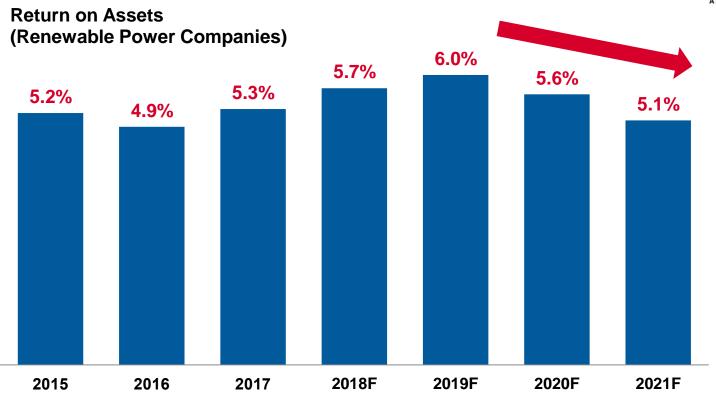

Rated Renewable Power Companies

- Significant investments in solar power in Japan
- Increased investments in Vietnam, given the lack of domestic opportunities, and currently unfavorable Japan tariffs for solar projects

Declining ROA of Renewable Power Companies

Rated Renewable Power Companies

Return on assets is on a downward trend, despite lower project costs, due to:

- Expiration of adders
- Lower supportive tariff
- Bidding price scheme
- Potential rise in financial cost

Power Development Plan 2018

- PDP2018 (2018-2037) was approved by National Energy Policy Council (NEPC) on 24-Jan-19
- Subject to review every 5 years
- Tariff Bt3.50-Bt3.63 per kWh (or avg. Bt3.58)
- Larger contribution from GAS. Coal is less (12%) (Gas (53%) Coal (12%) Renewable (20%) Imported Hydro (9%))
- More opportunities in solar power
- SPP renewal and IPP replacement

| Item | PDP 2015 (2015-2036) | PDP 2018 (2018-2037) |
|--|-------------------------|-------------------------|
| Grand total Capacity (end of plan) | 70,335 MW | 77,211 MW |
| New Capacity | 57,459 MW | 56,431 MW |

Private Rooftop Solar: 10,000 MW

Timeline: 1,000 MW over 10 years

Launch in 2019: 100 MW

Expected tariff Bt1.6-Bt1.8 kWh

SPP Renewal (25 projects): approx. 2,000 MW

IPP: 8,300 MW

| Type (MW) | PDP 2015 | PDP 2018 |
|------------------------------|----------|----------|
| Renewables | 21,648 | 20,766 |
| Pump-storage hydro power | 2,101 | 500 |
| Cogeneration | 4,119 | 2,112 |
| Combined Cycle | 17,478 | 13,156 |
| Coal | 7,390 | 1,740 |
| Import | 1,473 | 5,857 |
| Other (thermal) | 3,250 | - |
| Replacement (IPP/EGAT) | - | 8,300 |
| Energy Efficiency Plan (EEP) | - | 4,000 |
| Total (MW) | 57,459 | 56,431 |

Rating Factors

Positive

- Demand continues to grow in tandem with economic growth, albeit at a slower pace. Remote likelihood of precipitous drop
- Minimal payment risk of state-run power buyers
- New investment opportunities arising from PDP2018

Negative

- Chances of declining return on investment
- Tentative bidding scheme
- Rising cost of debt in the medium term
- Higher execution risks of overseas investments

Expected Impact on Rated Entities

 Credit ratings of large-scale and long-established power producers should remain solid, considering their competitive strengths, financing capabilities and substantial cushions.

 Medium-to-small power producers, especially new comers, are more susceptible to changes in investment landscapes due to moderate growth capabilities amid declining returns and higher risks of new projects.

REITs Rated by TRIS

| Name | Property Type | Rating | Outlook |
|-------------------|----------------------|--------|---------|
| CPNREIT | Retail Hotel | AA | Stable |
| GVREIT | Office | A- | Stable |
| HREIT | Factory Warehouse | BBB+ | Stable |
| FTREIT (TREIT) | Factory Warehouse | Α | Stable |
| WHART | Factory Warehouse | А | Stable |

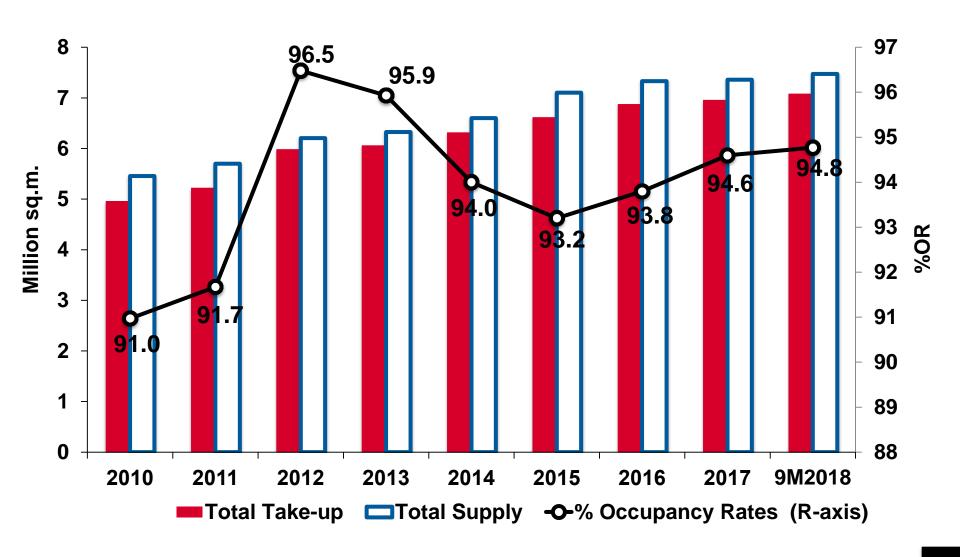

^{*} Note: 5 rated REITs accounted for 37% of total assets (REIT+PF) at YE 2017

REITs Industry Outlook

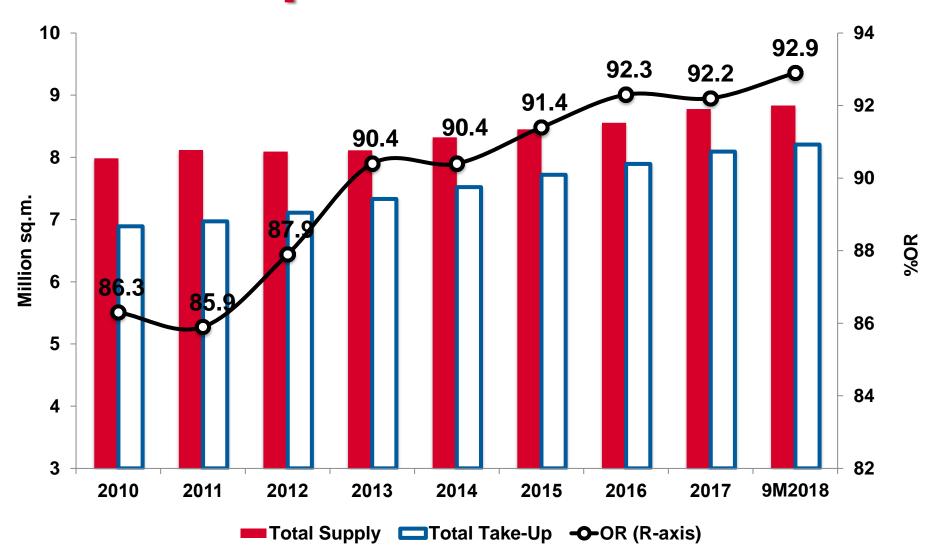

Retail Property in BMA

Office Space in BMA

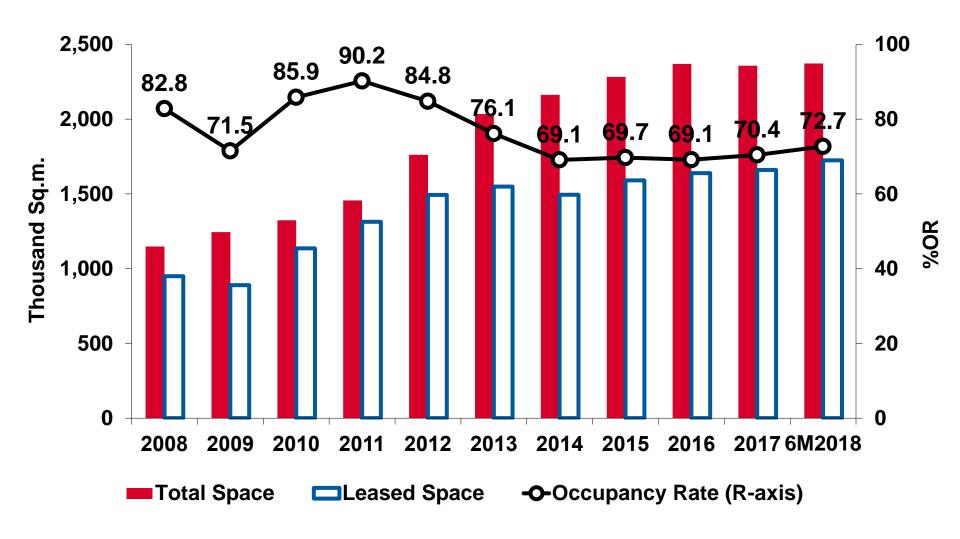

Source: CBRE

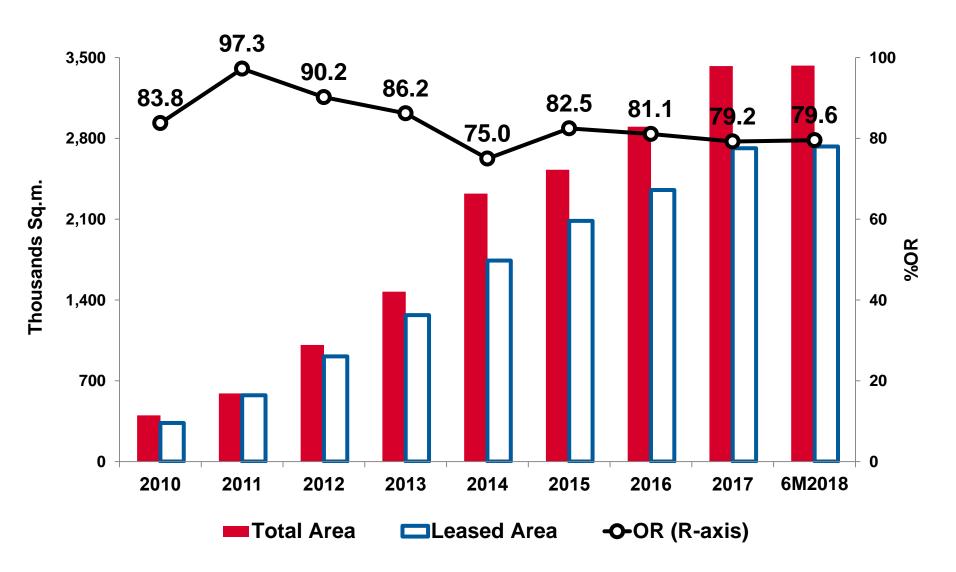

Factory for Rent

Warehouse for Rent

Sources: CBRE, TICON, WHA

Rating Factors

- REITs are assessed as companies with narrow scope of business
- Heavily regulated by SEC regarding
 - Business scope
 - Capital structure
 - Dividend payout
- Operation: OR/Rent
- Funding policy
- Liquidity management

Impact on Rated Entities

| | Regulations | Impact |
|-------------------|---|---|
| Business Scope | Invest in property for rent Completed >=75% Developing <=10% | Recurring income Less development risk |
| | Fixed Rent Portion >= 66% (for some property like Hotel and Hospital) | Predictable income |
| Capital structure | Max LTV 35% (non rated) Max LTV 60% (investment grade rated) | Limited-leveraged balance sheet |
| Distribution | >= 90% of <u>adjusted</u> net profit | Cash retention limitations Less financial flexibility Refinancing risk for bullet payment |

Our Observations

- Most REITs are set up by sponsors
- Sponsors tend to have controlling stake of 15%-25%
- LTV policy is in a conservative range of 30% 40%
- REITs have not set aside debt repayment reserve before paying dividend to unit holders, despite being allowed by the SEC
- Management of Conflict of Interest
- Balancing benefits for stakeholders
 - Too much dividend distribution?
 - Sufficient reserve for asset renovation?
 - Sufficient reserve for debt repayment?

REIT – Sponsor Relationship

- Sponsor usually sets up REIT manager and acts as property manager
- Sponsor provides supports to REIT by:
 - Maintaining a controlling stake
 - Providing personnel and real estate management know-hows
- REIT pursues growth through purchases of properties owned by sponsor
- Sponsor tends to treat REIT as a "captive" financing instrument.
- In some cases, sponsor provides implicit support and/or financial commitment to REIT

Rating on REITs vs. Sponsors

| Property type | REIT | Sponsor |
|---------------|-----------------------|--------------------------|
| Retail | CPNREIT (AA) | CPN (AA) |
| Office | GVREIT (A-) | Gold (BBB+) UV (BBB+) |

Rating Distribution and Actions

Rating actions in 2018:

- Assigned two new Issuer Ratings
- Downgraded Issuer Ratings of two companies and revised Outlooks of two companies to "positive" from "stable"

Source: TRIS Rating

Our Observations

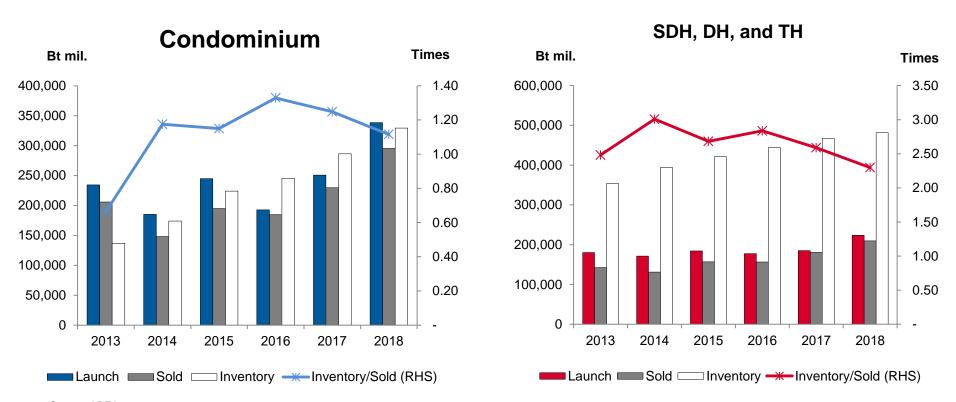

- Strong project launch and sale momentum continued from 2017
- New project launches, sales and ending inventory hit record high in 2018
- Average house price per unit rose from Bt3.9 mil/unit in 2017 to Bt4.5 mil/unit in 2018
 - Condominiums remained market dominant in terms of unit and value sold
 - Higher proportion of condominium sales to foreign buyers
 - Expect rate hikes to be gradual, unlikely to impact purchasing power
 - BOT's new mortgage measures aim to strengthen banks' underwriting standard and reduce speculation
 - Developers accelerated backlog transfers before new BOT measures implementation in April 2019

Units Launched, Sold, and Ending Inventory

- The value of new units launched, sold, and inventory grew steadily in the last three years
- Based on average sale value in 2016-2018, we believe it could take up to 1.5
 years to absorb to the remaining backlog

Source: AREA

Absorption Rate of New Projects (BMR)

- Demand for condominiums remains stronger than TH, SDH, and DH
- However, absorption rate of condominiums has declined as supply growth outpaced demand growth

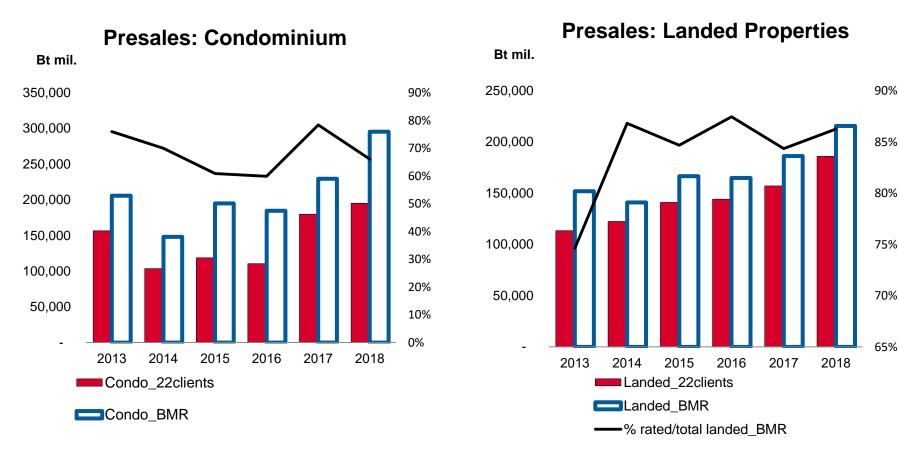

| | Condominium | | T | ownhouses | | De | etached hou | ises (SDH, D | H) |
|----------------|-------------|--------|--------|-----------|--------|--------|-------------|--------------|--------|

Presales by Rated Developers

- Large developers continue to dominate the market
- Presales of 22-rated developers accounted for 70%-80% of total presales in BMR

Source: AREA, TRIS Rating Source: AREA, TRIS Rating

2019 Industry Outlook

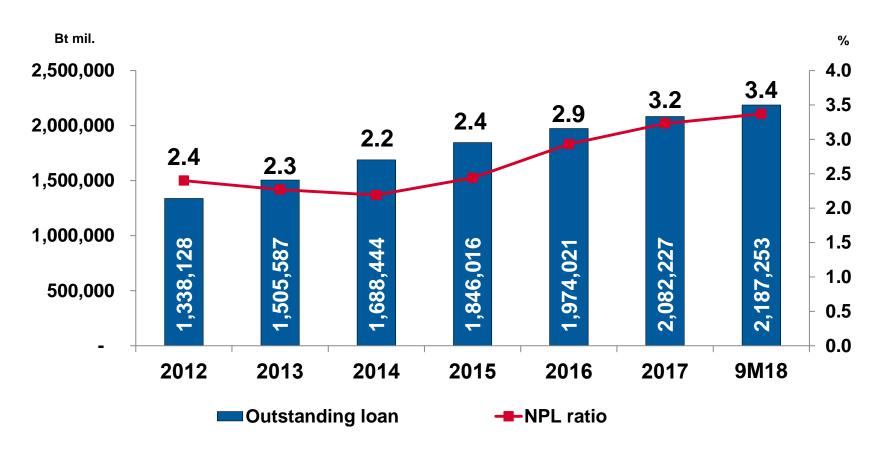

- We expect the market to slowdown in 2019 as negative factors outweigh positive factors
- We believe that the negative impact from macro-prudential measures will be short-lived as developers should be able to adjust their products and investments.

| Negative Factors | Positive Factors |
|---|---|
| The implementation of macro-prudential measures Economic slowdown in China may reduce demand from foreign buyers Rising NPLs lead to tightening of banks' mortgage underwriting | On-going investments in infrastructure projects still support project launch and demand along mass transit routes Relatively stable construction costs are positive for developers |

NPLs of Mortgage Loans

 NPLs increased steadily in the past five years from 2.2% at end-2014 to 3.4% at end-9M18

Source: BOT (based on data from 14 commercial banks)

Macro-prudential measures

- New mortgage loans for the second and subsequent homes account for 22% of new mortgage loans, according to the BOT
- Houses priced below Bt10 million per unit account for 90%-95% of total portfolio in terms of unit and 75%-80% in terms of value, based on data from 22 rated developers
- We estimate that if 70% of homebuyers borrow and 22% of them have more than one mortgage loans, then around 15% of homebuyers could be affected by the new LTV rules. However, the impact in terms of value would be around 10-12% of total sales

New LTV Rules (starting 1 April 2019)

| Housing type | LTV limits* | % down payment (new) | % down payment (current) |
|---|-------------|----------------------|--------------------------|
| Housing price < 10 mil. baht/unit | | | |
| 1st mortgage loan | 100% | 0%-10% | |
| 2nd mortgage loan (if the repayment period of the | | | SDH, DH, TH - 5% |
| 1st mortgage exceeds three years) | 90% | 10% | |
| 2nd mortgage loan (if the 1st mortgage period is | | | |
| less than three years) | 80% | 20% | Condominium - 10% |
| 3rd and subsequent mortgage loans | 70% | 30% | |
| Housing price > 10 mil. baht/unit | | | |
| 1st and 2nd mortgage loans | 80% | 20% | >=20% |
| 3rd and subsequent mortgage loans | 70% | 30% | >=2070 |

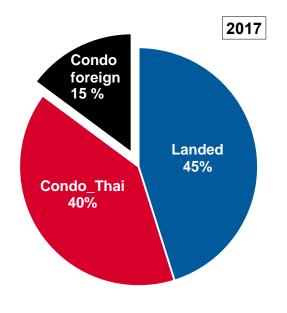

^{*} Include all top-up loans, except MRTA loans and SME loans

Source: BOT

Slowing foreign demand

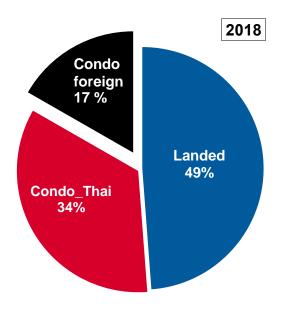

- Foreign buyers accounted for 33% of total condominium presales value in 2018 vs. 27% in 2017.
- However, the portion of foreign buyers was only 15% and 17% of total presales in 2017 and 2018, respectively.

Source: TRIS Rating

Total presales of 22 rated developers = Bt348bn in 2017

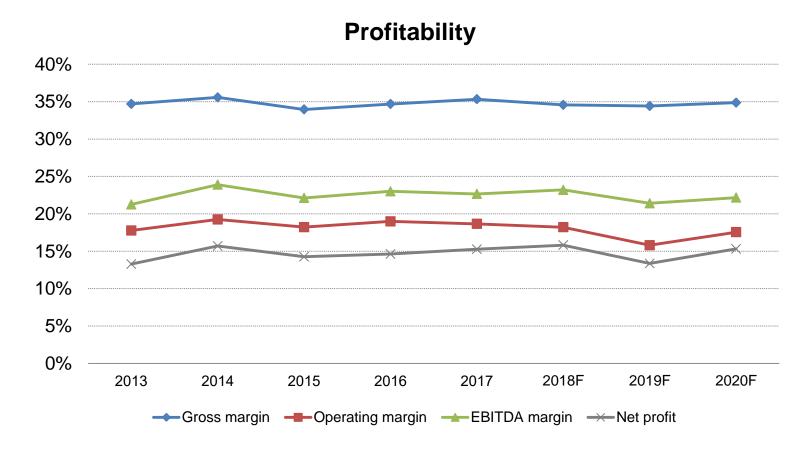

Source: TRIS Rating

Total presales of 22 rated developers = Bt381bn In 2018

Impact on rated developers

 Profitability in 2019 may drop due to delayed transfers and higher marketing and promotion expenses

Impact on rated developers

 Inventory may hover at a high level due to delay in unit transfers, leading to rising leverage
